$$\widehat{\psi_\delta(t)E_t h} \neq \widetilde{\psi_\Delta(t)E_t h}$$

$$\overline{\psi_\delta(t)E_t h} \approx \underline{\psi_\Delta(t)E_t h}$$

$$\overrightarrow{\psi_\delta(t)E_t h} \cong \overleftarrow{\psi_\Delta(t)E_t h}$$

Combinations are possible too:

$$\overline{\overline{\psi_\delta(t)E_t h}} \leq \underline{\overrightarrow{\psi_\Delta(t)E_t h}}$$

Braces have extra possibilities as explained below.

$$\overbrace{\psi_\delta(t)E_t h} \doteq \underbrace{\psi_\Delta(t)E_t h}$$
